

Set-Up Instructions

Please note: The ACE English Box cannot connect to a computer or laptop since it is a computer itself. You must connect it to a television, or to a monitor with added speakers.

Connect to an HDMI Television or Projector:

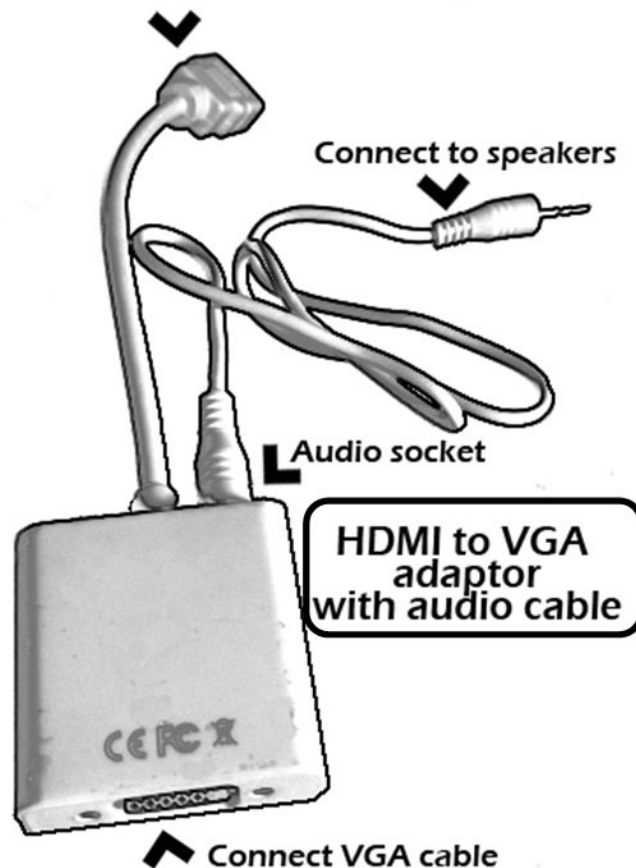

First, connect the supplied mouse to the ACE English Box using the USB port in the front. Then connect the power supply to the power supply port and the HDMI cable to the HDMI port. The ACE English Box connects to a television or an overhead projector via an HDMI cable. Use the television remote to control volume.

Always turn on the television or monitor before turning on the power supply.

Connect to a television or projector with a VGA Connection:

If your television or projector has a VGA connection instead of HDMI, please use the supplied **HDMI-to-VGA conversion adaptor**. Plug the HDMI end into the ACE English Box. Connect the VGA cable (not supplied) from the television or projector to the VGA socket on the **HDMI-to-VGA adaptor**. VGA cables do NOT carry the audio signal so it is necessary to use the audio cable supplied with the **HDMI-to-VGA Adaptor** to connect to the television or projector from the audio socket on the HDMI-to-VGA adaptor. Do NOT plug the audio cable into the audio jack on the ACE English Box. Use the television remote to control volume.

Connect to HDMI on ACE English Box

Connect to a VGA computer monitor:

Computer monitors do not have speakers built in so it will be necessary to use separate speakers (not supplied). Connect the VGA cable from the monitor to the HDMI-to-VGA adaptor which plugs into the ACE English Box. Plug one end of the auxiliary audio cable that comes with the HDMI-to-VGA adaptor into the speaker input and plug the other end into the audio jack on the HDMI-to-VGA adaptor. Use volume controls on the speakers to control volume.

If you have any problems setting up the ACE English Box, please contact us at 63794-93688 or 94424-82782.
